

Brainstorm & Idea Prioritization Template

Date	JUNE 2026
Team ID	
Project Name	Plugging-into-the-Future-An-Exploration-of-Electricity-Consumption-Patterns
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Template

Brainstorm & idea prioritization

Plugging into the Future: An Exploration of Electricity Consumption Patterns

Use this template to brainstorm ideas, identify electricity consumption trends, analyze energy usage patterns, and develop data-driven solutions for efficient energy management and sustainable development.

- ⌚ 10 minutes to prepare
- 🕒 1 hour to collaborate
- 👥 2-8 people recommended

●

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

⌚ 10 minutes

A

Team Gathering

Our team consists of members with backgrounds in data analytics, energy systems, computer science, and visualization. Everyone is familiar with the electricity consumption dataset before beginning the session.

B

Set the Goal

The objective is to analyze electricity consumption data to identify usage trends, seasonal variations, peak demand periods, and regional consumption patterns. The goal is to provide actionable insights for efficient energy management and future planning.

C

Learn How to Use the Tools

Use Microsoft Excel, Python (Pandas, Matplotlib), Power BI, Tableau, or Google Colab for data cleaning, visualization, and analysis. Ensure the dataset is prepared before starting the brainstorming session.

Open article →

1

Define your problem statement

How might we use data visualization and data analytics to discover electricity consumption patterns, identify peak demand periods, detect seasonal trends, and support smarter energy management for a sustainable future?

⌚ 5 minutes

PROBLEM STATEMENT

How might we analyze electricity consumption data to identify trends, forecast future demand, improve energy efficiency, and support sustainable electricity usage?

Key Rules of Brainstorming

To run an effective and productive session

- 😊 Stay focused on electricity consumption analysis
- 👂 Listen carefully to every team member
- 👥 Encourage innovative and data-driven ideas
- 💡 Generate as many ideas as possible
- 🚫 Avoid judging ideas during brainstorming
- 📊 Use charts, graphs, and dashboards whenever possible

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that relate to electricity consumption patterns.

🕒 10 minutes

Use this space freely!
The more ideas,
the better!

Analyze Trends

Identify usage trends	Daily / weekly / monthly patterns	Seasonal variations	Peak demand periods	Historic vs current comparison
-----------------------	-----------------------------------	---------------------	---------------------	--------------------------------

Visualization Ideas

Time series charts	Heat maps by region	Demand distribution charts	Energy usage dashboards
--------------------	---------------------	----------------------------	-------------------------

Data Sources

Smart meters	Utility companies data	Weather data	Population & economic factors
--------------	------------------------	--------------	-------------------------------

Insights & Impact

Identify high usage areas	Reduce energy waste	Support policy decisions	Promote sustainable energy use
---------------------------	---------------------	--------------------------	--------------------------------

Tools & Methods

Data analysis	Python / Excel	Power BI / Tableau	Machine learning models	Forecasting demand
---------------	----------------	--------------------	-------------------------	--------------------

Future Opportunities

Smart grid solutions	Renewable integration	Energy efficiency strategies	Sustainable energy future
----------------------	-----------------------	------------------------------	---------------------------

2

Group Ideas

Take turns adding your ideas while discussing older or related ones as you go. Once all, review e on the board, review them and choose a few to discuss further.

🕒 10 minutes

Add, build on,
or combine ideas.
The goal is to
explore possibilities
and think together.

Analyze electricity consumption by time, location, and user type

Identify peak demand times to optimize energy distribution

Discover seasonal trends to support better energy planning

Compare consumption across regions to find high usage areas

Forecast future demand using historical data and trends

Recommend energy efficiency strategies based on usage patterns

Build interactive dashboards for real-time monitoring and insights

Support sustainable energy initiatives with data-driven insights

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

TIP

Participants can use their stickers to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.
